

Business Audio from the **No. 1 Headset Brand**

With 33 years of innovation geared around creating an effortless computing experience and world-class development centers all over the world, you can trust Logitech with your business audio needs. We've taken our decades of headset expertise, our successes in designing leading audio products for the consumer market and our state-of-the-art testing know-how to develop business audio products that improve business user experience.

It's no wonder that Logitech is the long-standing No. 1 brand in headsets.*

Unmatched Combination of PC and Audio Expertise

We know how audio should sound

As a world leader in PC and gaming headsets, earphones and speakers, Logitech knows how to deliver realistic, immersive sound to the human ear. With a global matrix of engineering talent, knowledge assets, and leading-edge design and development centers, Logitech brings a rich heritage of innovation to business audio. We know how to hit all the right notes and eliminate any bad ones.

We get how work happens in the New Office

Business audio is evolving at an extraordinary rate of change. As the use of the single-purpose telephone gives way to computer-based softphones where multitasking is the norm, Logitech is uniquely positioned to apply our deep-rooted heritage in the PC space to the audio requirements of the New Office.

Trusted by Businesses, Loved by Employees

For years, we've been developing products that take 8+ hours of use day after day and are instrumental to keeping businesses productive and employees happy. It's in our DNA. Logitech's business audio solutions are designed to be so intuitive that people actually love to use them. And since all our headsets and speakerphones are plug-and-play, using them is simple—a huge success factor for enhancing user adoption.

The Sound of Innovation

Long before any of our business audio products come to market, massive insight, expertise and science goes into engineering each device. Logitech R&D combines computer modeling with real world testing (think anechoic chambers, head and torso simulators, and sophisticated instruments like our laser-equipped Klippel Distortion Analyzer) when creating new business audio products. The result: great sound, optimized performance, and compliance-tested assurance that our business audio products do not interfere with customer's existing products.
